## Method 12-a Cape, Central African, and Nile Buffaloes

**Width of boss:** Using a tape, measure the boss of each horn at its greatest width. **(W)** The angle for this measurement must be parallel to the axis (centerline) of the skull. Do NOT measure “green” or “soft” horn and do NOT measure any bone. Depending on the horn configuration, it can be possible to take a “semi-circumference” measurement for the width. Only measure the top section of the horn for the width; as soon as the horn starts curving inward stop the width measurement. (Figures 2) Boss measurements may not be taken outside the outer edge of the eye sockets. **A boss that has been enhanced by taxidermist materials disqualifies the head for Rowland Ward and cannot be entered.**

**Greatest Spread:** Establish outer limits of horns using two right-angle forms. Measure the spread in a straight line and at right angle to axis of skull. **(G)**

Cross section of the horn seen as if it were removed from the skull.

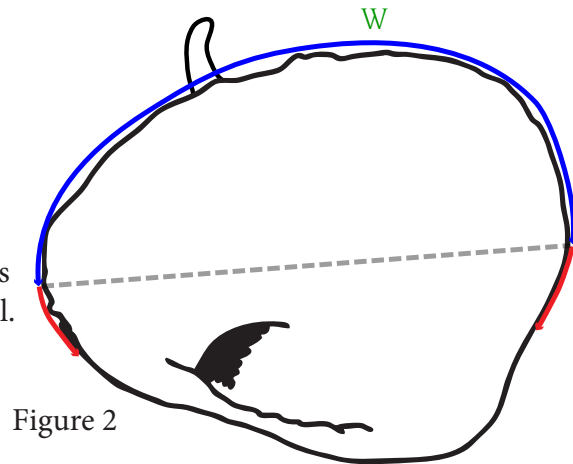

Figure 2

Comments (Note trophy repairs, remeasuring, and so on, here):
