## Method 3 European and Persian Fallow Deer

**Length:** Measure antlers on the outside curve from the lower edge of the burr to the tip of the main antler. **(L)**

**Circumference:** Measure each antler at the smallest point between the brow tine and the second point. **(CI)**

**Height:** Measure each palm along the outer curve from the point where the palm broadens to the farthest indentation between tines. **(H)** The lower point of this measurement should be taken where the first point on the back of the palm starts.

**Width:** Measure the palms along the outside of the antler at the widest place between tines and at a 90-degree angle to the axis of the palm. Do not bridge air gaps. **(W)**

**Count** All tines of 0.5 inch (1.3 cm) or more in length, include the tip of the main antler. To count as a point a tine must have a length that is equal to or greater than its base.

**Inside Span:** Measure the widest inside span of the antler on the palms (not on tines) at a 90 degree angle to the long axis of the skull and parallel to a line drawn through the left and right eye sockets. **(F)**

**Ranking/Score**

Fallow deer are ranked on a cumulative score of the lengths **(L)** and circumferences of the main beams **(CI)**, the heights **(H)** and widths **(W)** the palms, inside span **(F)**, and the score of the number of tines (one point per tine).

Comments (Note trophy repairs, remeasuring, and so on, here):
