

## Method 10

American bison, wisent, water buffalo, tamarau, anoa, gaur, gayal, banteng, kouprey, yak, and takin.

Rank on sum horn lengths, circumferences & greatest spread. (Anoa spread is recorded, not used in final score.)

	Left	Right
L	/8	/8
C	/8	/8
G		/8
<b>Score (L, C, G)</b>	/8	
E-tip to tip	/8

## Method 10

**Note:** Because of the large variety of horn configurations among these bovids you must read the RW Measuring Handbook before measuring any of these animals.

**Length (L):** For bison, wisent, gaur, gayal, banteng, kouprey, and yak, measure each horn on the outside curve starting at the lowest point on the side of the head and continue to the tip. For anoa, start on the front and continue to the tip. For water buffalo and tamarau, start on the upper edge of the front of the horn. Keep to the upper front edge and continue to the outside of the horn and then to the tip. For takin, start between the horns and move the tape onto the front ridge and from there to the outside of the horn and then to the tip.

**Circumference (C):** Measure the circumference near the base as possible BUT keep the tape at a 90-degree angle to the axis of the horn. To do so, form a continuous loop with the tape. With bison, wisent, gaur, and water buffalo, extra care must be taken to not "slant" the tape as it is very easy to make a circumference more or less parallel to the bases rather than at a 90-degree angle to the base. With takin, measure the base parallel to the base line.

**Greatest spread (G):** Measure the widest outside spread at a right angle to the long axis of the skull.

**Note:** For anoa the spread (G) measurement is required but is supplemental and not part of the score. For all other bovids, L plus C plus G is the total score.

**Tip to Tip:** Measure the Tip to Tip spread from the center of one horn tip to the other. (E) REQUIRED

Comments (Note trophy repairs, remeasuring, and so on, here):
