## Method 6 Walrus, Water Deer, Musk Deer

**Length:** Measure the length of the tusks on the outer curve from the base to the tip. **(L)** Typically the base is uneven; start the measurement at the base in line with the furthest projection of the tusk's ending. Many walrus's tusks are very worn off at the tip (or sometimes broken) if this is so they must be carded off (Figures 1 and 2)

**Circumference:** Measure the circumference of the tusks at the base at a 90 degree angle to the axis of the tusk. **(C)** The tape may not bridge any air gaps over the jagged end of the tusks. If there are any grooves in the teeth, the tape measure must span the grooves; the tape measure must not be pressed into any depressions. (Figure 2)

Soft Tape. In the case of water and musk deer the circumference of the tusks will be below 2 inches (5 cm) and they cannot be effectively measured by a steel tape. Any circumference of 2 inches or less can be taken with a cloth, polyester or Vinyl tape measure. This rule applies ONLY for circumferences of 2 inches or less.
