Method 8

African Spiral-horned Antelopes (Giant Eland, common Eland, Bongo, Sitatunga, Bushbuck, Southern Nyala, Mountain Nyala, Greater Kudu, Lesser Kudu).

Length: Measure around the spiral, keeping the tape on top of the spiral ridge. Start at the base, find the lowest point of the front ridge, and proceed to the tip. When spiral ridge ends, proceed in straight line to tip; do not continue to spiral. **(L)**

Circumference: Measure the circumference at a 90 degree angle to the axis of the horn. **(C)** Elands and greater kudus have hard-to-measure bases, so take care **(1)** to ensure continuous loop with tape, **(2)** to not depress tape into valleys or deep grooves, and **(3)** to not weave the tape along the edge of the base.

Tip to Tip: Measure the Tip to Tip spread from the center of one horn tip to the other. **(E)** REQUIRED

Correct way to measure the base at a 90-degree angle to axis of the horn

Wrong way to measure

Comments (Note trophy repairs, remeasuring, and so on, here):
