## Method 7-c

### Barbary sheep (Aoudad), Blue sheep and Dagestan or Eastern Tur

**Length: (Barbary sheep)** Measure from the lowest point on the front of the horn to the tip. (L) With aoudad there is normally a small extension point at the base of the horn, start here by hooking the tape under it and proceed over the center of the horn to the tip. (Figure 1)

**Length: (Blue Sheep)** Blue sheep have a ridge on the center top of the horn that starts about in the middle between the horns where they meet. Start to measure on this ridge and stay on it till it fades away and go from there straight to the tip. (L) (Figure 2)

**Length: (Dagestan Tur)** Start the measurement on the front of the base at the point of the horn closest to a line drawn from the center of the eye socket on the opposite side of the skull. Measure in the center of the front curve from the lowest edge of the base to the tip. (L) Follow the grain. (Figure 3)

**Circumference:** Measure the base of each horn. (C) The tape must form a continuous loop over horn material and be at a 90-degree angle to axis to the horn. In most cases this will mean the tape will be a distance away from the edges of the horn base.

**Tip to Tip:** Measure the Tip to Tip spread from the center of one horn tip to the other. (E) **This is a required measurement.**

**Growth Rings:** Count the rings on both horns. (Supplemental)
