Method 2 Caribou and Reindeer

Length: Measure the main antler on the outside on the center from the lowest edge of the burr to the furthest tip of the palm. The tape must not be pressed into the groove above the burr. **(L)** Measure the shovel from the main antler to its farthest extending point. **(L1)** Measure the bez from the main antler to its farthest extending point. **(L2)** For both L1 (shovel) and L2 (bez) the length is measured to the furthest extending tine from the main antler, this can be at the top, bottom or the middle of the shovel or bez. The bez and the shovel must originate from the main antler.

Circumference 1: Measure the smallest circumference between the shovel and the bez. **(C1)** (If there is no shovel measure C1 between the burr and the bez.) Measure the smallest circumference between the bez and the rear point. **(C2)** Measure the smallest circumference between the rear point and the palm. **(C3)** (If there is no rear point **C2** and **C3** fall on the same place and the same measurement is used twice.)

Circumference 2: Measure the circumference of the top palm at its largest place between two valid tines. **(C4)** This may only be taken between valid tines that come directly off the top palm, and not between one tine that originates from another tine. See the tine marked red which branches from the T1 tine.

Length of Top Tines: Measure the two longest tines on the palm. **(T1& T2)** (This cannot be the tine that was the end of the main antler. **(L)** And it cannot be a tine coming off a tine, see red line off **(T1.)**

Count: All tines of 0.5 inch (1.3 cm) or more in length, include the tip of the main antler. To count as a point a tine must have a length that is equal to or greater than its base. Pay special attention to the points on the shovel (brow) and the bez; many of these can be "knuckled" or "knobbed"; make sure they are (a) at least 0.5 inch long and (b) have a length that is equal to or greater than its base.

Width: Measure the shovel from the top point to bottom point at a 90 angle to the center line of the shovel. **(W)** Use a caliper to do this. If the shovel is not palmated and just a spike, enter a value of "1" for its score as long as it is at least one Inch in length and not wider at the base than it is long.

Inside Span: Measure the widest distance between the main antlers (not any points) at a right angle to the long axis of the skull. **(F)**

Ranking/Score: Caribou/reindeer are ranked on Total Score of the above.

Outside Spread: Measure the widest outside spread at a right angle to the long axis of the skull. **(G)** This is required but not part of the score.
