## Method 4-a Palmated Moose and Giant Deer (Irish Elk)

- Length:** Measure the palm along the underside from the highest point between two tines on the upper edge to the lowest point between two tines on the lower edge of the palm. This measurement should be parallel to the inner palm edge line. **(L)**
- Circumference:** Measure each main antler at its smallest point between the burr and the palm. **(C1)**
- Width:** Measure the width of palm along the underside at the widest place. Measure between two tines on the outside of the palm to the center of the inner edge, the measurement being taken at a 90- degree angle to the inner palm edge line. **(W)**
- Tines:** Count the number of tines 1 inch (or 2.5 cm) or more in length. This includes all tines along the edges, those growing off the upper or lower palm surfaces, and those on the main antlers. **(T1, T2, etc.)**
- Greatest Spread:** Measure the antlers in a straight line at a right angle to the axis of the skull. **(G)**
- Weight:** Weigh the dry rack attached to the skull without the lower jaw. (Supplemental)
- Cut:** Record whether the skull was cut or not. (Supplemental)
- Irish elk or Giant Deer only:** Do not measure (L) but do record (W), otherwise make the same measurements as above.
- Ranking/Score:** Moose/Irish elk are ranked on cumulative score of the above

Comments (Note trophy repairs, remeasuring, different shipping address, and so on, here):
