Method 3 European and Persian Fallow Deer

Length: Measure antlers on the outside curve from the lower edge of the burr to the furthest tip of the main antlers. **(L)**

Circumference: Measure each antler at the smallest point between the brow tine and the second point. **(CI)**

Height: Measure each palm along the rear curve from the point where the palm broadens to the farthest indentation between tines on the top of the palm.

(H) The lower point of this measurement should be taken from the tip of where the first valid tine on the back of the palm starts. Use calipers.

Width: Measure the palms along the outside of the antler at the widest place between tines and at a 90-degree angle to the line of measurement of the main antler. The tape must stay in contact with antler surface at all times and may not bridge air gaps. **(W)**

Count All tines of 0.5 inch (1.3 cm) or more in length, include the tip of the main antler. To count as a point a tine must have a length that is equal to or greater than its base.

Span: Measure the widest inside span of the antler on the palms (not on tines) at a 90- degree angle to the long axis of the skull and parallel to a line drawn through the left and right eye sockets. **(F)**

Score: Fallow deer are ranked the cumulative score of the above.

CIC Score: Submit endorsed CIC form. (Supplemental)
